DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-29 and 33, are drawn to an assay method determining target molecules in a single sample aliquot, classified in class 435, subclass 7.92, for example.
 - II. Claims 30-32 and 34, are drawn to an assay method determining target molecules in multiple sample aliquots classified in class 435, subclass 7.92, for example.
 - III. Claims 35-43, are drawn to an *in vitro* method for evaluating antibody response in a subject, classified in class 435, subclass 7.1, for example.
 - IV. Claim 44, is drawn to a kit to determine an allergen, classified in class 424, subclass 171.1 or class 422, subclass 61, for example.
2. The inventions are distinct, each from the other because of the following reasons:
 - A. Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the methods and kits are drawn to patently distinct inventions having different modes of operation and different functions. The kits comprise different reagents in order to detect an allergen, wherein the method of Group III detects antibody response with out necessitating a separate chamber employing an immobilized ligand. Although the methods of Group I and II detect the same event they are drawn to different method in that the number of sample aliquots analyzed are different. Because all the inventions have different method steps, employing different reagents, they are independent and separate methods and kit inventions.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Please note that the classifications in the restriction are illustrative only and **do not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes foreign patents and applications as well as literature searches.

4. A telephone call was made to Harriet M. Strimpel, D. Phil (Reg. No.37,008) on 7/25/01 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
